## Contents

**Foreword**  
*Tomasz Okruszko, Wiktor Kotowski* ............................................................... 3-5

1. Why we need to know more about the relationships between flood regimes and the responses of nature and natural processes  
*Maarten Platteeuw, Nico Pieterse* ................................................................. 7-14

2. Plant communities response to floodwater conditions in Ławki Marsh in the River Biebrza Lower Basin, Poland  
*Tomasz Okruszko, Wiesław Dembek, Michał Wasilewicz* ........................................... 15-21

3. Influence of macrophytes on river water levels and flood dynamics in the Upper Eider river valley a riparian wetland in Northern Germany  
*Michael Trepel, Jan Jacob Kieckbusch* .............................................................. 23-32

4. Recovery of alluvial meadows after an extreme summer flood: a case study  
*Petr Koutecký, Karel Prach* ................................................................................... 33-39

5. The use of reference areas in the conservation and restoration of riverine wetlands  
*Martin Joseph Wassen* ......................................................................................... 41-49

6. Competition and succession affecting vegetation structure in riparian environments: implications for nature management  
*Wiktor Kotowski, Hubert Piórkowski* ..................................................................... 51-57

7. Nutrient mobilisation and losses related to water conservation in peatlands  
*Andrzej Sapek, Barbara Sapek, Sławomir Chrzanowski, Marek Urbaniak* .................. 59-65

8. Phosphorus and Nitrogen cycling in fen vegetation along different trophic conditions in the Biebrza valley, Poland  
*Mohssine El Kahloun; Marian Gerard, Patrick Meire* .............................................. 67-78

9. Response of riparian vegetation to the decrease of flooding: Narwiąński National Park, Poland  
*Monika Szewczyk, Wiesław Dembek, Andrzej Kamocki* ........................................... 79-86

10. Could ecological flood defences be used as functional stepping-stones along migration routes of wetland birds? A theoretical approach  
*Maarten Platteeuw* .............................................................................................. 87-93

11. The impact of flooding regime on ecosystems in a tidal freshwater area  
*Aat Barendregt* ...................................................................................................... 95-102
